WOODWORKING

UNLEASH YOUR CREATIVITY

NAME PLAQUE CARVING

TOOLS REQUIRED: Arbortech Power Chisel- 60 degree “V” chisel, Table clamp, Aerosol Paint, Wood sealer, Cloth

Step 1 Trace the artwork onto your timber or medium density fibre board using carbon paper. For this project we have used a fibre type board called MDF.

Step 2 Secure the piece of wood and prepare your power chisel for action by placing a small drop of the Arbortech Cam Lubricating oil in the lubrication port before starting.

Step 3 Using the 60 degree “V” chisel, carve out your artwork.

Step 4 Using an Aerosol spray can, coat the project and leave overnight to dry.

WOODWORKING

UNLEASH YOUR CREATIVITY

Step 5 After the paint has dried gently sand off the top layer of your name plaque leaving all the carved out areas to stand out with your painted color. When you have completed sanding, seal your wood panel with any standard wood sealer. Then you are ready to hang your name plaque!
